

List of Items Page

Adding Items to the Personal List

The primary user has a list they can add more items they want to find. All the user has to do is use the search function to find the item they want, like “bananas” and can add that item to their list after searching.

WAREHOUSE MANAGEMENT AND PATHFINDER

Group 12

Search Page

Finding Items in the Store

The user has a map for them to use to easily find items in the warehouse. All they have to do is choose the item they want to find and select it in the map tool. The map will then map out the easiest rout for them.

Managers also have Functionality available to them

Managers can use the tool to add or remove items from the database. They can also edit the map to change the layout of the warehouse and where the items are in the new layout.
